UGC/MATH 2018(JUNE MATH SET-A), Q.104

Let  $X$  and  $Y$  be two random variables satisfying  $X \geq 0, Y \geq 0, E(X) = 3, Var(X) = 9, E(Y) = 2$  and  $Var(Y) = 4$ . Which of the following statements are correct?

- A)  $0 \leq Cov(X, Y) \leq 4$
- B)  $E(XY) \leq 3$
- C)  $Var(X + Y) \leq 25$
- D)  $E(X + Y)^2 \geq 25$

SOLUTION

$$E(X^2) = Var(X) + (E(X))^2 = 18 \quad (0.0.1)$$

Similarly,

$$E(Y^2) = Var(Y) + (E(Y))^2 = 8 \quad (0.0.2)$$

We can use the Covariance inequality for this question,

$$(Cov(X, Y))^2 \leq Var(X)Var(Y) \quad (0.0.3)$$

The proof of this inequality is as shown,

$$\begin{aligned} Var\left(\frac{X}{\sigma_X} \pm \frac{Y}{\sigma_Y}\right) &= Var\left(\frac{X}{\sigma_X}\right) + Var\left(\frac{\pm Y}{\sigma_Y}\right) \\ &\quad + 2Cov\left(\frac{X}{\sigma_X}, \frac{\pm Y}{\sigma_Y}\right) \end{aligned} \quad (0.0.4)$$

$$\begin{aligned} &= \frac{1}{\sigma_X^2} Var(X) + \frac{1}{\sigma_Y^2} Var(Y) \\ &\quad + 2Cov\left(\frac{X}{\sigma_X}, \frac{\pm Y}{\sigma_Y}\right) \end{aligned} \quad (0.0.5)$$

$$(0.0.6)$$

$$= 2 \pm 2 \frac{Cov(X, Y)}{\sigma_X \sigma_Y} \quad (0.0.7)$$

Since Variance is always positive,

$$Var\left(\frac{X}{\sigma_X} \pm \frac{Y}{\sigma_Y}\right) \geq 0 \quad (0.0.8)$$

$$2 \pm 2 \frac{Cov(X, Y)}{\sigma_X \sigma_Y} \geq 0 \quad (0.0.9)$$

$$1 \pm 1 \frac{Cov(X, Y)}{\sigma_X \sigma_Y} \geq 0 \quad (0.0.10)$$

$$|(Cov(X, Y))| \leq (\sigma_X)(\sigma_Y) \quad (0.0.11)$$

$$(Cov(X, Y))^2 \leq Var(X)Var(Y) \quad (0.0.12)$$

Substituting values of variance we get,

$$-6 \leq Cov(X, Y) \leq 6 \quad (0.0.13)$$

**Therefore, option A is incorrect.**

From equation 0.0.13,

$$Cov(X, Y) = E(XY) - E(X)E(Y) \quad (0.0.14)$$

$$-6 \leq E(XY) - E(X)E(Y) \leq 6 \quad (0.0.15)$$

$$0 \leq E(XY) \leq 12 \quad (0.0.16)$$

**Therefore, Option B is correct.**

Now,

$$E(X + Y)^2 = E(X^2) + E(Y^2) + 2E(XY) \quad (0.0.17)$$

$$E(X + Y)^2 = 26 + 2E(XY) \quad (0.0.18)$$

From equation 0.0.16,

$$26 \leq E(X + Y)^2 \leq 50 \quad (0.0.19)$$

**Therefore, Option D is correct.**

Now,

$$\begin{aligned} Var(X + Y) &= Var(X) + Var(Y) + 2Cov(X, Y) \\ &= 13 + 2Cov(X, Y) \end{aligned} \quad (0.0.20)$$

$$(0.0.21)$$

From equation 0.0.13,

$$1 \leq Var(X + Y) \leq 25 \quad (0.0.22)$$

**Therefore, Option C is correct.**
